

# SMOKE FREEZER Unpacking and Setup

**You must read this to operate the TEC Pipe correctly!**

1. Unbox the SMOKE FREEZER, remove the packing material carefully and discard.
2. Find the box with the power supply in it. Be careful there is a glass stem for you in there as well. Plug one end into the wall, the other into the pipe.
3. Lube the end of the glass stem found in the power supply box with Vaseline and insert it into the outlet located above the display. You might have to push and twist. If you don't get a good seal, you might have dislodged the "O" Rings that keep it sealed. If that happens, get a pick or a pen and guide the O ring back into its seat and retry to insert after doing so.
4. Find the glass adapter and install it between the glass stem and Tar Buster.
5. Locate the Tar Buster (s) (it is already loaded and ready to use with fresh carbon charcoal).
6. Connect the Tar Buster (s) to the adapter.
7. Locate the Silicone Mouthpiece. You can either use standard Mouth Peace Filters or cotton balls. I find cotton balls to be more economical and work just as good or better.
9. Insert either a cotton ball or a filter in the Mouthpiece and connect to the Tar Buster. (Twist It while pushing in, it will stay put)
10. Locate the Ash Catcher. PUT NO MORE THAN 1 INCH OF WATER! DO NOT FILL IT UP!
13. It will take 4-5 minutes to get to temperature. The display will continue to drop in temperature. Don't worry it is normal. You can start to use it when it reaches -10 degrees.
14. While you are packing your bowl(s) leave it plugged in for the entire session.
15. Light your bowl and enjoy! When you're done, you just unplug.

## Advice and Tips

- Depending on the humidity and where you enjoy your session, it may clog the pipe although not likely. What you do is unplug the unit and wait a few minutes. Then plug in and restart.
- There are more mouthpieces with angles in a plastic bag with additional extra O-Rings. These are optional and only if you care to use them.
- Your unit will be ready to use when it reaches -10 on the display.
- DO NOT UNDER ANY CIRCUMSTANCES PUT WATER INSIDE THE PIPE! WE WILL KNOW YOU DID AND WE WILL NOT COVER ANY WARRANTY IF YOU DO THIS!
